Name of the License

MIT License

Description

A media library organizer for music enthusiasts. Catalogs and sorts yours music based on metadata that can be manipulated with the integration of plugins, both created by users or premade. The project has 477 contributors, with 1.8k forks. It is mainly python code based and seems to be currently managed to this day with issues and responses from mere hours ago. SLOC is around 15k

Proposal

Contribution Type

I plan to make two contributions. One towards testing and the other towards documentation.

Motivations

My motivations lie mostly in the ease and that in creating the documentation contribution I am effectively going to have to run through the documented steps to get to the testing purpose. And I do know I need more work on creating test cases. So I feel this would be a good starting point for me.

Related Issue

Testing: <https://github.com/beetbox/beets/issues/5229>

Documentation: <https://github.com/beetbox/beets/issues/5259>

Medium

Testing: trying to ensure that running tests locally cleanup after itself within the temp files.

Documentation: creating a beginner friendly version showing more of the CLI of the getting started user guide.

Standards and Guidelines

Following the guideline is being respectful and asking before just starting on an issue in the case that someone is already working on it. Trying to match the formatting in both code and documentation that is already set. These are the relevant standards in which will shape ,my contribution, in hopes that they accept it and make it a part of their project.
