Issue Summary

Agorakube is a project with the goal to provide users the simplest way to install Kubernetes across physical and virtual (cloud included) environments. Currently Ubuntu, Centos and Debian are support, but the aim is to open this product to other environments, platforms and user interfaces. It mainly for developers or companies that want to provide a mail style development and data structure service to their employees and stakeholders without having to use Kubernetes from the already given environments. The OSS has 23 contributors, with 52 forks, and is made mainly of 39.6k lines of Jinja code.

The issue I am presenting is a feature request to add support for more github actions.

"I propose integrating more GitHub Actions into the Agorakube project to automate various project management tasks. This could include automating workflows such as:

- Running tests whenever a pull request is opened or updated.

- Creating new issues or projects from a template when specific conditions are met.

Currently I only see that automation actions are used mainly for marking stale requests and attempting to label issues based on their content.

Describe the solution you'd like

To make the project management process more efficient and consistent, and it could also help catch issues earlier by automating tests.

Describe alternatives you've considered

Continue mostly manual management or having issues sit until they become stale.

Additional context

Procedures

I did my best to use welcoming inclusive language that was respectful and focused on the furthering of the community in order to give the best constructive criticism, as mentioned in the copied excerpt below directly from the the project's contribution standards. [agorakube/CODE_OF_CONDUCT.md at master · ilkilabs/agorakube (github.com)](github.com)

Per the issues page of the project I do not yet see the issue or similar issues in the current or closed portions, as linked here. I tried to communicate with the project managers via the link to slack given in the home page, but the link does not work and there is an issue c [Issues · ilkilab/agorakube (github.com)](github.com)

- Being respectful of differing viewpoints and experiences
- Gracefully accepting constructive criticism
- Focusing on what is best for the community
- Showing empathy towards other community members
